

Abzac drums, naturally

P a c k a g i n g

A major player in fibre drums, number 1 in Europe, Abzac:
 > develops tailor-made technical solutions,
 > offers a local service thanks to their network of plants.

Economical

Customisable

Strong

Emptying by pump

Ecological

Incinerable

Light

Stackable

A complete range of drums

Two main families of drums, adapted for different sectors and uses:

Crimped drums:

From the standard model to specific models, Abzalis, Abzacim, Abzaliq.

All-fibre drums:

Abzaplus and the brand new Abzasanté, perfectly adapted to specific hygiene demands.

Tailor-made technology

The fibre drum is adapted to the specific needs of its content. It meets the demands of industrial usage for the transport and storage of products that are dry, pasty, semi-liquid or liquid, even for markets and destinations with difficult climates.

Lightweight, it is easy to handle by hand or mechanically. It is generally possible to stack up to three drums high.

Reliable and high-performing packaging

To guarantee total quality Abzac uses a central laboratory for the testing of raw materials and for research and development. Here, tests and simulations are carried out (drop tests, tests on a vibrating table to simulate the demands of transportation, tests on water-resistance and impermeability.)

The environment-friendly packaging solution

The drums are made from natural or recycled fibres and so are ecological and recyclable. They are a part of an industry that boasts the highest levels of recycling. The drums can help to bring down the cost of transport through reductions in the weight of packaging. Thanks to the network of local factories located in the heart of the markets, Abzac can offer local supply to optimize the efficiency of your supply chain.
